Consulting

MOSIMTEC's team of professional simulation consultants utilize a wide variety of tools and analytical approaches to solve your most challenging problems. A passion for learning the nuances of each system we model and utilizing world class modeling skills is what differentiates MOSIMTEC consultants from competitors.

Our team brings invaluable international experience, having worked across four continents for organizations ranging from Fortune Global 500 multi-nationals to leading edge consumer technology start-ups. The skill-set of our team ranges from engineering, technology, finance, business, academia and industry specialists. This has enabled MOSIMTEC to establish itself as a leading advanced decision support and solutions providing company.

Use MOSIMTEC's consulting services to:

- Answer difficult operation questions
- Create a digital twin of your system
- Optimize resources
- Complete a bottleneck analysis
- Develop a risk mitigation model
- Leverage AI and data analytics

Software & Training

MOSIMTEC's experienced team offers a variety of training courses for starting simulation modeling and developing advanced skills. We share best practices, identify pitfalls and help clients fast-track solutions for their areas of focus.

We are knowledgeable in a range of industry leading tools and advise on tool selection, software support and provide software licenses.

Historical Outcomes

- Identified workload assignment approach to save **\$240,000 annually**
- Reduced trailer processing times by **50%** through assignment optimization
- Identified **\$20 million** cost avoidance at a platinum mine site
- **\$150 million** additional revenue opportunity by improved raw material blending
- Determined optimal staff schedules for a hospital, saving over **\$8 million**
- Reduced excess inventory by optimizing material flow, leading to a **\$1 million** saving

"Tens of millions capital investment saved by analysis from the simulation model...Gives way more confidence than arm waving"

Our core values are true, transparent and transformative.
